

Realizing miniaturization of the set by low on-resistance and low capacitance

33V/8.0A N-channel Single-type MOS FET FK8V0305

■ Overview

FK8V0305 is a N-channel MOS FET suitable for DC/DC converter achieving industry's top class low-on resistance and reduced the capacitance at the same time by the fine patterning process.

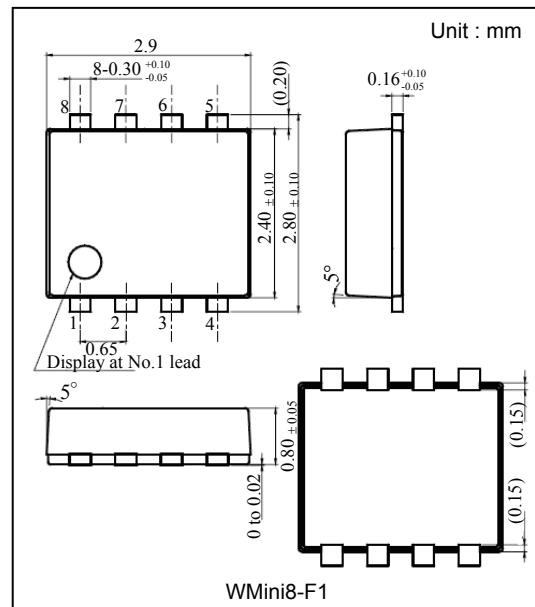

It is a small environment-friendly halogen-free package (WMini8) and contributes to the miniaturization of the sets..

■ Feature

- Low on-resistance: typ. $16\text{m}\Omega$ ($V_{GS}=4.5\text{V}, I_D=4.0\text{A}$)
- Low Ciss ($C_{iss}=500\text{pF}$)
- Small package (WMini8-F1)
- Eco-friendly : Halogen free package

■ Application

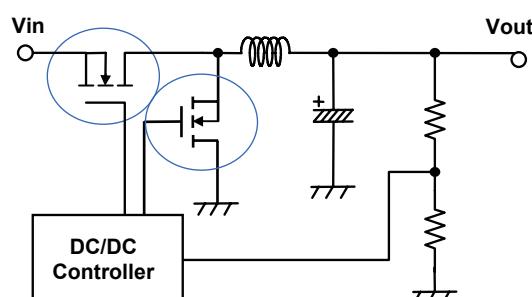

DC/DC converter

■ Specification (Tentative)

Polarity	Product number	Type	VDSS (V)	VGSS (V)	ID (A)	RDS(on) (typ) (mΩ)		Ciss (pF)	Package
						VGS=10V	VGS=4.5V		
Nch	FK8V0305	Single	33	± 20	8.0	11	16	500	WMini8-F1

■ Circuit Example

■ Internal Circuit
