

Normally – OFF Silicon Carbide Junction Transistor

| | | |
|---------------------------|---|--------|
| V_{DS} | = | 1200 V |
| V_{DS(ON)} | = | 1.4 V |
| I_D | = | 3 A |
| R_{DS(ON)} | = | 470 mΩ |

Features

- 175 °C maximum operating temperature
- Temperature independent switching performance
- Gate oxide free SiC switch
- Suitable for connecting an anti-parallel diode
- Positive temperature coefficient for easy paralleling
- Low gate charge
- Low intrinsic capacitance

Package

TO-247AB

Advantages

- SiC transistor most compatible with existing Si gate-drivers
- Low switching losses
- Higher efficiency
- High temperature operation
- High short circuit withstand capability

Applications

- Down Hole Oil Drilling, Geothermal Instrumentation
- Hybrid Electric Vehicles (HEV)
- Solar Inverters
- Switched-Mode Power Supply (SMPS)
- Power Factor Correction (PFC)
- Induction Heating
- Uninterruptible Power Supply (UPS)
- Motor Drives

Absolute Maximum Ratings

| Parameter | Symbol | Conditions | Values | Unit |
|-----------------------------------|------------------|--|--|------|
| Drain – Source Voltage | V _{DS} | V _{GS} = 0 V | 1200 | V |
| Continuous Drain Current | I _D | T _{C,MAX} = 95 °C | 3 | A |
| Gate Peak Current | I _{GM} | | 5 | A |
| Turn-Off Safe Operating Area | RBSOA | T _{VJ} = 175 °C, I _G = 1 A, Clamped Inductive Load | I _{D,max} = 3 @ V _{DS} ≤ V _{DSmax} | A |
| Short Circuit Safe Operating Area | SCSOA | T _{VJ} = 175 °C, I _G = 1 A, V _{DS} = 800 V, Non Repetitive | 20 | μs |
| Reverse Gate – Source Voltage | V _{SG} | | 30 | V |
| Reverse Drain – Source Voltage | V _{SD} | | 25 | V |
| Power Dissipation | P _{tot} | T _C = 25 °C | 91 | W |
| Storage Temperature | T _{stg} | | -55 to 175 | °C |

| Texas Instruments | UCC27322 | 9.0 | — | — | — | — |

SiC SJTs do NOT require a current-driven gate driver. Modern Si IGBT drivers offer sufficient gate currents to drive SJTs. This is a partial list of widely available commercial Silicon IGBT/MOSFET gate drivers which may be used to drive the GA03JT12-247. Specific product information including advanced features and pinouts should be obtained from the individual product manufacturer's websites.

The GA03JT12-247 can be driven similar to silicon IGBTs or MOSFETs in which a gate driver IC is used to supply positive gate current peaks to the device at turn-on and negative current peaks at turn-off. Unlike the IGBT or MOSFET, the GA03JT12-247 also requires a continuous gate current for the device to remain on after the initial current peak. An example gate current waveform for the GA03JT12-247 is shown in Fig. 15.

Single-Level SJT Gate Drive

Producing the necessary gate current peaks and continuous currents can be accomplished by using a gate drive circuit shown in Fig. 21. The gate driver output node is connected to an NPN/PNP silicon BJT pair in a totem pole configuration which provide gate current to the SJT gate. The NPN/PNP pair are controlled by the gate drive IC connected through base resistor R_b . The pair's output at node N_1 is connected to gate resistor R_G and capacitor C_G placed in parallel and connected to the SJT gate terminal. The gate resistor determines the continuous gate current. The gate capacitor produces positive and negative current peaks, which enable fast charging and discharging of the SJT's terminal capacitances. Additional detail on the single-level SJT gate driving technique is discussed in GeneSiC Semiconductor Application Note AN-10A. (<http://www.genesicsemi.com/index.php/references/notes>)

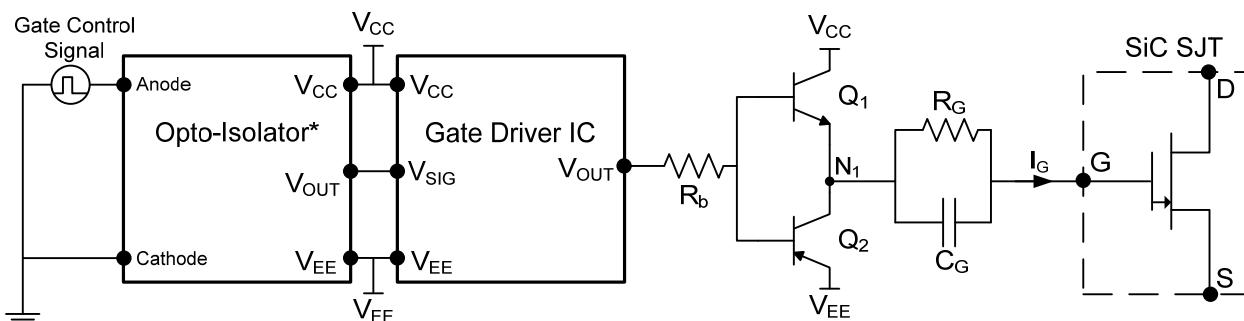

Figure 21: Single-Level SJT Gate Driver Configuration (* External signal isolation is recommended for non-isolated gate driver ICs.)

Single-Level Gate Drive Conditions

| Parameter | Symbol | Conditions | Values | | |
|----------------------------|---------------|--|--------|---------|------|
| | | | Min. | Optimum | Max. |
| Supply Voltage | V_{CC} | | 15 | 20 | V |
| Negative Supply Voltage | V_{EE} | | -10 | -5 | V |
| Output Current, Peak | $I_{OUT, pk}$ | Package Limited, | 1.0 | 1.5 | A |
| Output Current, Continuous | I_{OUT} | $I_D = 3.0 \text{ A}, T = 175^\circ\text{C}$ | 0.15 | 0.25 | A |

Output Gate Components

| | | | | | |
|---------------------------|------------|--|-------------------------------------|----|----------|
| Gate Resistance | R_G | $V_{CC} = 15 \text{ V}, I_G \approx 0.25 \text{ A}, T = 175^\circ\text{C}$ | 15 | 44 | Ω |
| Gate Capacitance | C_G | $V_{CC} = 15 \text{ V}, I_{G,pk} \approx 1.5 \text{ A}, T = 175^\circ\text{C}$ | 5 | 7 | nF |
| Base Resistor | R_b | | | 10 | Ω |
| NPN/PNP BJT Output Buffer | Q_1, Q_2 | | 2N6107/2N6292 pair or equivalent ** | | |

** - Complimentary BJT pair with $I_C \geq 5 \text{ A}$ and $V_{CEO} \geq 60 \text{ V}$

Two-Level SJT Gate Drive

The GA03JT12-247 can also be driven with a gate drive circuit shown in Fig. 22, in which two gate drive ICs and NPN/PNP pairs are operated with different supply voltage (V_{CC}) levels in order to minimize gate drive losses. By using a separate lower voltage output gate driver IC connected to gate resistor R_G , the power consumption of the continuous current is reduced. Additional detail on the two-level SJT gate driving technique is discussed in GeneSiC Semiconductor Application Note AN-10B. (<http://www.genesicsemi.com/index.php/references/notes>)

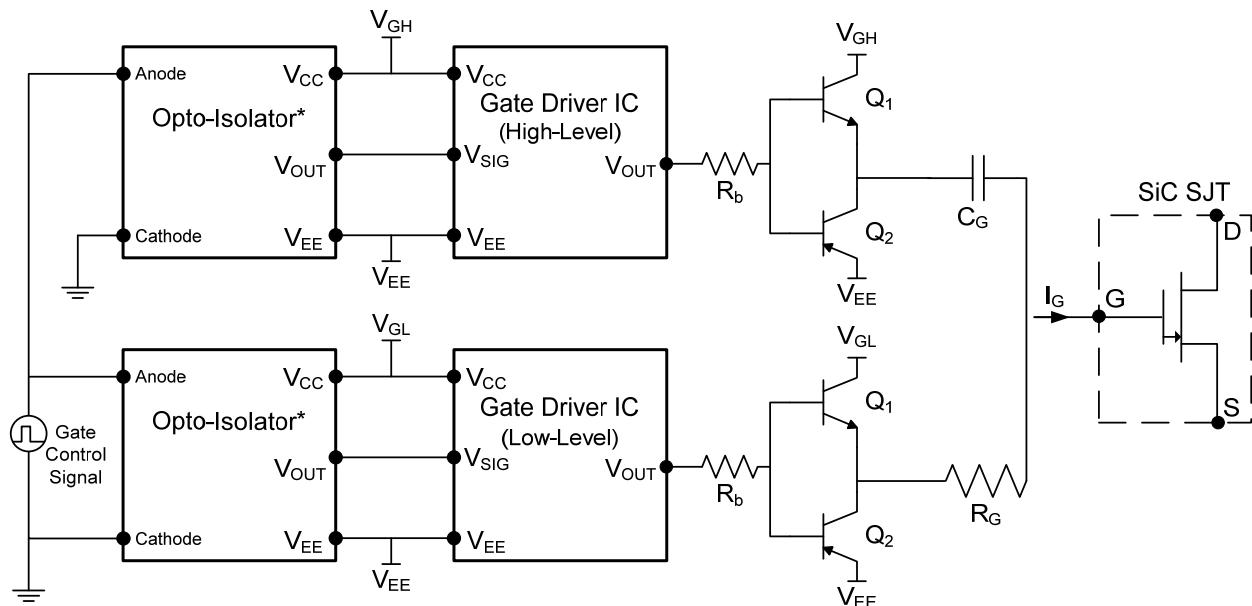

Figure 22: Two-Level SJT Gate Diver Configuration for Reduced Drive Losses (* External signal isolation is recommended for non-isolated gate driver ICs.)

Two-Level Gate Drive Conditions

| Parameter | Symbol | Conditions | Values | | | Unit |
|-----------------------------------|--------------------|--|--------|---------|------|------|
| | | | min. | Optimum | max. | |
| Supply Voltage, High Level Driver | $V_{CC}(V_{GH}^+)$ | | 12 | 18 | | V |
| Supply Voltage, Low Level Driver | $V_{CC}(V_{GL}^+)$ | | 5 | 6 | | V |
| Negative Supply Voltage | V_{EE} | | -10 | -5 | | V |
| Output Current, Peak | I_{OUT} | Package Limited, | 1.0 | 1.5 | | A |
| Output Current, Continuous | I_{OUT} | $I_D = 3.0 \text{ A}, T = 175^\circ\text{C}$ | 0.15 | 0.25 | | A |

Output Gate Components

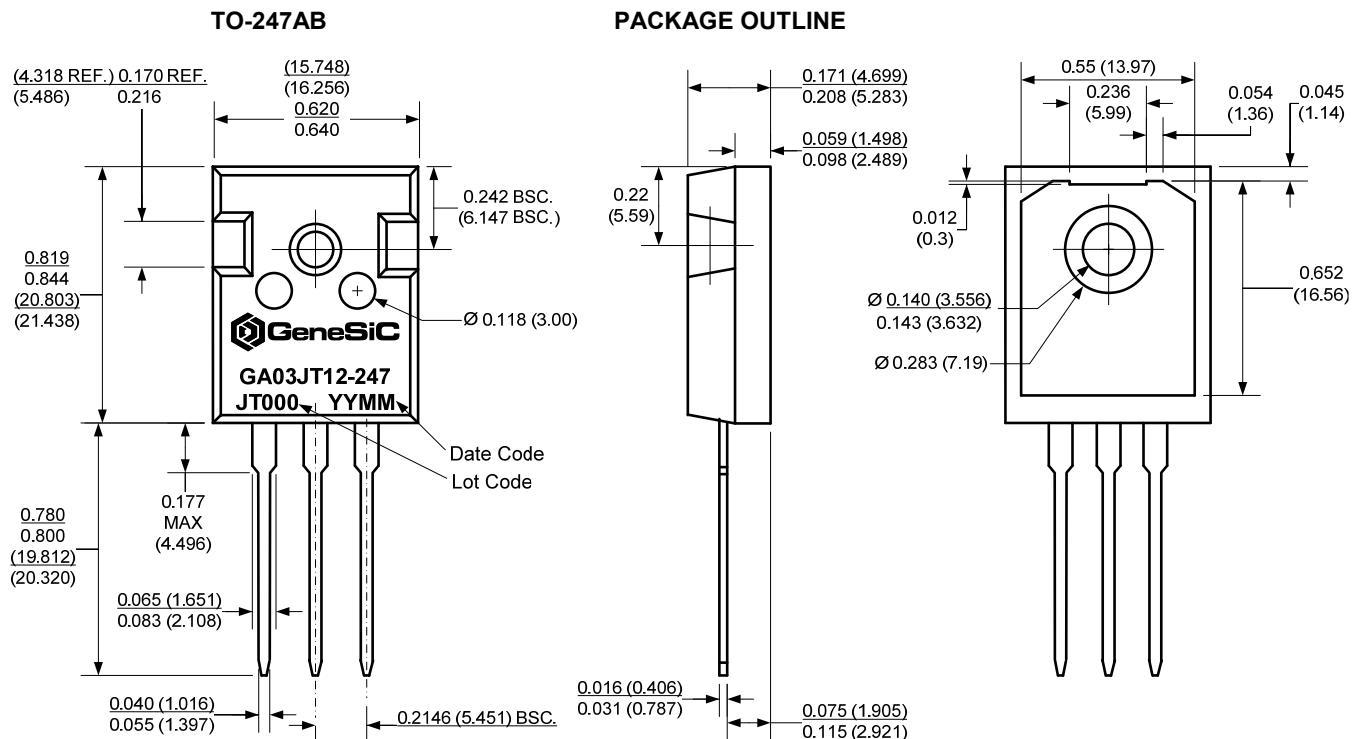

| | | | | | |
|------------------|-------|--|-----|---|----------|
| Gate Resistance | R_G | $V_{GL} = 5.5 \text{ V}, I_G \approx 0.25 \text{ A}, T = 175^\circ\text{C}$ | 1.6 | 5 | Ω |
| Gate Capacitance | C_G | $V_{GH} = 18 \text{ V}, I_{G,pk} \approx 1.5 \text{ A}, T = 175^\circ\text{C}$ | 5 | 9 | nF |
| Base Resistor | R_b | | 10 | | Ω |

NPN/PNP BJT Output Buffer Q_1, Q_2 2N6107/2N6292 pair or equivalent**

** - Complimentary BJT pair with $I_C \geq 5 \text{ A}$ and $V_{CEO} \geq 60 \text{ V}$

+ - Consult application note AN-10B for more information on parameters V_{GH} and V_{GL} .

Package Dimensions

NOTE

- NOTE**
1. CONTROLLED DIMENSION IS INCH. DIMENSION IN BRACKET IS MILLIMETER.
2. DIMENSIONS DO NOT INCLUDE END FLASH, MOLD FLASH, MATERIAL PROTRUSIONS
