

3 Volt, General Purpose Low Noise High f_T Silicon Transistor

MP4T6325 Series

Features

- Low Voltage Operation (3 - 5V)
- High f_T (11 GHz)
- Low Noise Figure with 1-5 mA Current
- Inexpensive
- Available on Tape and Reel

Description

The MP4T6325 series of low voltage silicon bipolar transistors provide low noise figure at a bias of 3-5 volts and collector current of 1 to 5 mA. These inexpensive surface mount transistors are useful for low noise amplifiers and VCOs in portable battery operated RF systems from VHF through 2.5 GHz.

The MP4T6325 series has high f_T (11 GHz) and provides 1.5 dB noise figure with 1-5 mA current and 3 volts bias at 1 GHz. These transistors also have low phase noise when used in 3-5 volt low power battery operated VCOs through 2.5 GHz.

The MP4T6325 series are inexpensive transistors useful for portable battery operated RF systems that require low current drain from 3-5 volts DC supplies.

The MP4T6325 family of transistors is available in chip (MP4T632500), SOT-23 (MP4T632533), SOT-143 (MP4T632539) and in Micro-X (MP4T632535) packages. Surface mount packages are available on tape and reel.
